INFORMATION DISCLOSURE STATEMENT

Commissioner For Patents
P. O. Box 1450
Alexandria, VA 22313-1450

Dear Sir:

Pursuant to 37 C.F.R. §1.97, the art identified on the attached form(s)
PTO/SB/08A and other matters discussed below may be helpful to the Patent Office in
its examination of the application identified above.

A copy of each of the documents is enclosed herewith for the Examiner's
consideration.

Admission Of Prior Art

Prior Art Product drawings PA-1 through PA-10 illustrate products used in the
United States of America and are admitted by the applicants to be prior art to the
invention claimed in the above-captioned instant patent application.

COMMENTS ON CITATIONS

Prior Art Product Drawings PA-1 through PA-4 illustrate a diaphragm dispensing
pump for liquid hand soap on sale in the United States of America more than one year
prior to the filing date of the above-captioned patent application. The pump is used in a

wall-mounted dispenser, and the pump is substantially similar to the pump inside the wall-mounted dispenser 10 illustrated in the U.S. Patent No. 6,216,916. See FIGS. 4-8 for the detailed structure of the pump. The pump illustrated in the prior art product drawings PA-1 through PA-4 functions in a substantially identical manner to the manner of the pump operation described in the U.S. Patent No. 6,216,916.

Prior Art Product Drawings PA-5 and PA-6 illustrate a prior art R13R valve on sale in the United States of America more than one year prior to the filing date of the above-captioned patent application.

Prior Art Product Drawings PA-7 and PA-8 illustrate a prior art V1 valve on sale in the United States of America more than one year prior to the filing date of the above-captioned patent application.

Prior Art Product Drawings PA-9 and PA-10 illustrate a prior art V25 valve on sale in the United States of America more than one year prior to the filing date of the above-captioned patent application.

The Examiner's attention is invited to FIGS. 1-4 of U.S. Patent No. 5,033,655 as showing the ultrasonic deformation or swaging a closure wall around the flange of a pressure-actuable valve.

The Examiner's attention is invited to U.S. Patent No. 5,115,950 which illustrates and describes the ultrasonic deformation or swaging of a closure wall around the flange of a pressure-actuable valve. FIGS. 18 and 19 illustrate the ultrasonic swaging horn
310.

Serial No. Not Yet Designated - - - 3

The Examiner's attention is invited to FIG. 13 of U.S. Patent No. 6,273,307 which illustrates the ultrasonic deformation or swaging of a fitment wall 148 around the flange of a pressure-actuatable valve 200.

The Examiner's attention is also invited to U.S. Patent No. 6,371,340 which describes the inelastic deformation of a clamping ring wall 80, 180 about the flange or ring 20, 120 of a silicone rubber valve 12, 112.

The Examiner's attention is invited to FIGS. 5 and 6 of U.S. Patent No. 5,115,950 as illustrating a support member 68 under a pressure-actuatable valve wherein the member 68 is located radially inwardly of flow passages 62 which are in registry with a peripheral margin of the valve head.

The Examiner's attention is also invited to the U.S. Patent No. 5,271,531 which also shows a support member 68 with flow passages 62 underneath a pressure-actuatable valve.

The Examiner's attention is invited to U.S. Patent No. 6,062,435 which discloses a pressure-actuatable valve restraint structure 56 (FIG. 2) for preventing in-venting through the valve. FIG. 11 shows flow passages or openings 120 between support members 116 in the restraint structure 56, and the flow openings 120 permit liquid to flow up through the openings 120 and against the bottom, downwardly facing surface of the closed valve central portion 82.

The Examiner's attention is also invited to U.S. Patent No. 6,065,642 which discloses an anti-in-venting structure 60 in FIGS. 14-17. As shown in FIG. 16, the structure 60 includes a central pad 64 for contacting the flat surface 6d on the interior

side of the valve head. Flow apertures 66 are provided in the structure 60 to accommodate flow of liquid against the valve head.

The Examiner's attention is also invited to the figures in the U.S. Patent Nos. 5,115,950 and 5,271,531 which illustrate various flange designs for the pressure-actuable valve.

The Examiner's attention is especially directed to other pressure-actuable valve flange designs in FIGS. 19, 21, and 44-98 of U.S. Patent No. 5,409,144.

The order of listing of the art on the attached Form PTO/SB/08A should not be construed as an indication of the importance of the listed art.

The Patent and Trademark Office Examiner is requested to review the art and determine the extent of the materiality of the disclosures thereof with respect to the patentability of the subject invention. It is expected that the Patent and Trademark Office Examiner will independently conduct a complete search for relevant prior art.

No inference should be drawn and no representation is made or intended: (a) that a search has been made, or if made, was complete; (b) that the art on the attached list presents a comprehensive investigation of the prior art; or (c) that art no more pertinent than that listed is in existence.. [See 37 C.F.R. §1.97(g)]

The mere citation of any art herein is not to be construed as an admission: (a) that the art disclosure is, or is considered to be, necessarily within the invention field of endeavor, pertinent to the instant invention, or equivalent to the instant invention; (b) that the art disclosure is, or is considered to be, necessarily prior in time to a particular date

Serial No. Not Yet Designated - - - 5

which may be relevant in the instant patent application; (c) that the art disclosure is, or is considered to be, material to patentability as defined in 37 C.F.R. §1.56(b); (d) that the art disclosure is otherwise necessarily prior art with respect to the instant invention and application; and/or (e) that the information, protocols, results and the like reported by third parties are accurate or enabling. [See 37 C.F.R. §1.97(g).]

No inference should be drawn that the discussion of any art herein is a discussion of each and every feature disclosed therein.

Also, there is reserved the right to later set forth how the instant invention is distinguished over the disclosures of any document or other art, including the disclosures of the art cited herein, that may be cited by the Examiner in rejecting a claim in the instant patent application.

Respectfully submitted,

Dated: October 28, 2003

By: _____
